

FundFinder AI — Google Africa Applied AI Lab

Draft application answers (copy & paste). Applicant email for this form: fluersdigitalmedia@gmail.com. Prepared for Dayo & Joyce.

PAGE 1 — confirmed questions

Email *

fluersdigitalmedia@gmail.com

Company name *

FundFinder AI (A2F Partners Limited)

Company website *

<https://fundfinder.ng>

HQ Location *

Nigeria

Field * (choose one)

AI / ML — best fit for this AI-native programme. (Alternative vertical: **Finance**.)

Please provide a link to your latest pitch deck *

■ **ACTION:** A deck exists in your project folder (FundFinder-Pitch-Deck.pptx). Upload it to Google Drive (or Slides) → set 'Anyone with the link can view' → paste that link here. I can export it to PDF if you prefer a lighter file.

Describe what your company does in one sentence. *

FundFinder AI is an AI-native platform that scans hundreds of sources daily to automatically match African entrepreneurs with the grants, loans and accelerators they qualify for — and drafts their applications for them.

If available, please link to your latest product demo and/or video

<https://fundfinder.ng> (the product is live — this is the working demo). Optionally add a 60–90s Loom/YouTube walkthrough later.

LIKELY LATER-PAGE QUESTIONS — pre-drafted (form had a 'Next'; I couldn't reach those pages with the browser down)

What problem are you solving, and for whom?

Access to finance is the #1 barrier for African SMEs. Billions in grants, loans and accelerator funding exist, but the opportunities are scattered across hundreds of sites, poorly publicised, and often closed before founders hear about them — and capable businesses get rejected for weak, rushed applications. The people affected are Nigerian and African entrepreneurs, SMEs and farmers: mostly youth-led, digitally active businesses underserved by traditional banks.

How does your product use AI? (and what would you build with Google's models?)

FundFinder is AI-native. We use LLMs to (1) read and structure messy funding-opportunity pages into clean, matchable data; (2) score each opportunity against a founder's business profile for eligibility; and (3) draft tailored application answers from the founder's profile, which they review before submitting. With early access to Google's latest models (Gemini), we would sharpen eligibility matching, automatically extract each funder's application questions and requirements, generate higher-quality draft applications, and power a multilingual WhatsApp funding assistant for entrepreneurs across Africa.

What is your solution?

One platform that (1) automatically scrapes and verifies hundreds of funding sources daily into a continuously-updated hub; (2) matches each entrepreneur to the grants, loans and accelerators they qualify for; and (3) helps them apply with AI-drafted applications plus email and WhatsApp deadline alerts. It also consolidates 2–5 complementary businesses into joint SPVs and channels those bundled deals to backers such as the Bank of Industry.

What traction do you have?

Live at fundfinder.ng, refreshed automatically by a daily scraping pipeline, with dozens of verified opportunities published and growing weekly. Email newsletter live (Zoho); WhatsApp alerts built. Five A2F Partners programmes (SPV, Debt Finance, M&A, MREIF, Agricthon) integrated into the matching engine, and organisations can self-register their own programmes. Applied to the UNDP timbuktoo Launchpad; building an early base of Nigerian founders.

Who is on the team?

Dayo Akinwale — Founder & CEO (A2F Partners / FundFinder); leads product, strategy and partnerships. Joyce Ozochijoke — Head of Growth; sales, business development and CRM background (200+ employer/creative relationships, 150+ leads/month, 40% deal-closure and reply rates). Plus a small full-time team shipping the product.

Business model / how do you make money?

Three streams: (1) subscriptions — recurring access to premium matching, alerts and AI-application credits; (2) on-demand credits for AI-drafted applications; (3) a partner pipeline (B2B/B2G) where lenders and programmes pay to reach a qualified, pre-matched applicant pipeline and to receive consolidated SPV deals. Free discovery drives reach; revenue comes from applications and partners.

Stage

Live product with early users, pre-revenue (Pilot / early-stage). Incorporated 2026 as A2F Partners Limited; HQ Nigeria.

Before you submit

- Confirm the **Field** choice (AI / ML vs Finance).
- Host the **pitch deck** and paste the link (Page 1).
- The form has additional pages after 'Next' — send me those questions (or reconnect the browser) and I'll draft them too.
- Do not submit passwords through Google Forms.
